colors: 

CONTINUOUS BAG SYSTEM - HOW IT WORKS?

The Saclo continuous bag system is based on a special “endless” bag (up to 110 metres long) which is unrolled, closed and cut every time the operator has to throw away the trash.

When one bag is closed, the next is immediately ready to use!

BAG
REPLACEMENT

 25 sec.

Waste collection cabinet in wood with **continuous bag system**.

Saclo Cabinet Office

Description

Elegant and effective, it goes well in **commercial areas and in the common areas of offices and public places** (e.g. schools, hospitals or institutions), **Cabinet Office** is perfect to make **separate waste collection** easier, keeping the surrounding area clean and tidy. The Cabinet Office is available in **wood** and in the **steel** version.

Consisting of a solid construction, this cabinet can be adjusted as needed: **2, 3 or 4 holes according to the types of waste to be sorted** (e.g. paper, plastic, unsorted and organic). Collection through the continuous bag will allow the cleaners to **seal and cut the bag** according to the amount needed, thus eliminating useless waste of plastic and above all taking half the time to change the bag compared to the traditional system.

The **graphic customisation of Cabinet Office** is an excellent feature for companies that love to stand out, promoting respect for the environment through their visual language.
